Dernière mise à jour : 15-04-2008

-
writes the dirty buffers from the Data Buffer Cache (where the server process records changes to blocks) to the data files when :

- checkpoints occur
- dirty buffers reach threshold
- there are no free buffers
- timeout occurs
- RAC (Real Application Clusters) ping request is made
- tablespace OFFLINE
- tablespace READ ONLY
- table DROP or TRUNCATE
- tablespace BEGIN BACKUP
