

## Objectives

Soumis par OCA

19-03-2008

Dernière mise à jour : 15-04-2008

- Outlining the Oracle architecture and its components (memory, processes, physical and logical structures)
- Listing the structures involved in connecting a user to an Oracle instance (connection, session and SQL commands execution)

### Tasks of a DBA :

- to plan and create databases
- to manage database availability
- to manage memory, physical and logical structures
- to manage storage based on design
- to manage security, users and privileges
- network administration
- backup and recovery
- database tuning
